The Psychology of Aging: Theory, Research, and Practice

1984 Janet Belsky

This book brings together a diversity of perspectives on the psychology of aging. Exploring theoretical, conceptual, empirical and practical viewpoints on the topic, the editors have brought together a set of experts to offer insight into a range of contemporary issues of aging. Discusses the theoretical, conceptual, empirical, and practical issues relating to aging. Brings within reach excellent examples from multiple perspectives on the psychology of aging. Offers multi-disciplinary insight for social workers and health professionals as well as researchers in the social sciences and medicine.

Buy this book. This unique book represents the first multi-disciplinary examination of ageing, covering everything from basic cell biology, to social participation in later life, to the representations of old age in the arts and literature. A comprehensive introductory text about the latest scientific evidence on ageing, the book draws on the pioneering New Dynamics of Ageing Programme, the UKâ€™s largest research programme in ageing. The book gives a critical overview of earlier narrative theories and summarizes previous scientific attempts to uncover relationships between language and personality. It also deals with social memory and group identity: various narrative forms of historical representations (history books, folk narratives, historical novels) are analyzed as to how they construct the past of a nation.
