Pacific Northwest Hydro-thermal Power Program: --a Regional Approach to Meeting Electric Power Requirements; Report to the Congress [on The] Department of the Interior [and] Department of the Army #United States, General Accounting Office

The steps marketing functions of the Secretary of Intertie: Pacific Northwest-Pacific Western took to involve interested the Department of the Interior and the Southwest Intertie Project, parties in the rate process were: Bureau of Reclamation under the kV: Kilovoltâ€™the electrical unit of 1. On May 15, 2006, Westernâ€™s Desert Reclamation Act of 1902 (ch. 1093, 32 measure of electric potential that Southwest Region mailed a notice Stat. 388), as amended and equals 1,000 volts. announcing an informal meeting to all supplemented by subsequent laws, kW: Kilowattâ€™the electrical unit of Intertie cust The Pacific Northwest faces some critical energy issues over the next 20 years. There is significant uncertainty about energy supplies, energy prices, and the implications of competitive energy markets. Therefore, as energy demands continue to rise, it is important for the states in the region to understand the risks and opportunities of different energy supply and demand options.Â For much of the past 50 years, these states have relied heavily on hydroelectric power to meet their energy needs, and this inexpensive electricity has helped keep electricity rates low in the region, compared with the rest of the United States. However, the region cannot add much new hydroelectric capacity, so increasing demands for electricity in the future will have to be met by other sources. The Bonneville Power Administration (BPA) prepared this EIS to examine the environmental impacts of the Pacific Northwest Power Planning and Conservation Act, which will foster regional electric power planning in the four Northwest states, as well as increase BPAâ€™s authority to address future power needs.
